Preface vii

Optical studies of single terrylene molecules in polyethylene
P. Tchénio, A.B. Myers and W.E. Moerner 1

Spectral diffusion and individual two-level systems probed by fluorescence of single terrylene molecules in a polyethylene matrix
L. Fleury, A. Zumbusch, M. Orrit, R. Brown and J. Bernard 15

Single molecule spectroscopy: fluorescence excitation spectra with polarized light
F. Güttler, J. Sepiol, T. Plakhotnik, A. Mitterdorfer, A. Renn and U.P. Wild 29

Peak value of the cross-section of zero-phonon line's absorption
K.K. Rebane and I. Rebane 39

Ultra-narrow optical hole burning in ruby
A. Szabo 47

Inhomogeneous broadening and trap effect in hole burning of Sm^{2+}-doped mixed crystals
J. Zhang, S. Huang and J. Yu 51

Room temperature persistent spectral hole burning in neutron-irradiated IaB-type diamond
R. Bauer, A. Osvet, I. Sildos and U. Bogner 57

Spectral hole-burning study of squaraine dyes in polymer films
E. Vauthey, J. Voss, C. De Caro, A. Renn and U.P. Wild 61

Photochemical hole-burning in fluorine-containing polymers
N. Murase and K. Horie 71

Photon-gated photochemical hole burning using a zinc tetraphenylporphine derivative
N. Kishii, K. Shirai, N. Asai, S.-i. Tamura and J. Seto 79

Photon-gated photochemical hole burning by two-color sensitization in an azide polymer matrix
S. Machida, K. Horie, O. Kyono and T. Yamashita 85

Photon-gated photochemical hole burning using zinc tetraphenylporphine and various electron acceptors
S.-i. Tamura, N. Kishii, N. Asai and J. Seto 93

Symmetry species conversion in rotational tunneling systems observed by hole burning: high resolution spectroscopy of dimethyl-s-tetrazine in n-octane
K. Orth, P. Schellenberg, J. Friedrich and W. Häusler 99

Persistent spectral hole burning in dye-doped rare gas matrices
P. Geissinger, W. Richter and D. Haarer 109

Structural relaxation in dye-surface systems: spectral diffusion and thermal recovery of spectral holes burnt into chemi- and physisorbed dye molecules
B. Sauter and C. Bräuchle 117

Persistent spectral hole burning in metal-free tetraphenylporphyrin-doped polymethylmethacrylate core fiber
H. Suzuki, E. Higurashi, A. Morinaka, T. Shimada, K. Sukegawa and D. Haarer 125

Matrix-induced and permanent dipole moment of Zn-octaethylporphin in polyvinylbutyral
R.B. Altmann, D. Haarer, N.I. Ulitsky and R.I. Personov 135

A pressure tuning hole burning study of resorufin in protic solvents
P. Schellenberg and J. Friedrich 143

Pressure and temperature dependences of optical dephasing of the $S_1 \leftarrow S_0$ transition of chlorin in polycrystalline *n*-octane probed by spectral hole burning
A. Ellervee, J. Kikas, A. Laisaar and A. Suisalu 151

Hole burning and pressure phenomena in chromoproteins
J. Gafert, J. Friedrich, F. Parak and J. Fidy 157

Temperature cycling of persistent hole spectra: a method for investigating the TLS density in amorphous materials
L. Kador 165

Temporally multiplexed Fourier holography and pattern recognition of femtosecond-duration images
P. Saari, R. Kaarli and M. Rätsep 175

Nanosecond spectral diffusion and optical dephasing in organic glasses over a wide temperature range: incoherent photon echo study of resorufin in D- and D_6-ethanol
N.V. Gruzdev and Yu.G. Vainer 181

Dynamical theory for optical coherent transients in solids: fast and ultrafast optical dephasing
I.S. Osad'ko 197
